DESCRIPTION: OBESITY AFFECTS BRAIN
REPORTER: MARIA CELESTE
In health, overweight people, have a smaller brain, which may cause the risk of developing Alzheimer and dementia. A neurologist from the University of California in Los Angeles, found that older people, who are overweight, have between 4% and 8% less cerebral mass than those who are in shape. This loss affects the region responsible for memory, attention, and decision making. The good news is that the harm is reversible until certain point if people begin controlling their weight and exercising regularly.
